(57) Abstract : The present invention relates to pharmacological anti-ulcer activity of Coccinium fenestratum (gaertn) colebr. This invention gives an account on its phytochemical profile and antiulcer activity of ethanolic extract of Coccinium fenestratum (CF) (Gaertn) colebr. (Family: Menispermaceae) stem bark in Aspirin and pylorus ligated induced peptic ulceration in the albino rats. The preliminary phytochemical screenings of various extracts were performed to establish the pharmacognostical profile of the stem-bark. Preliminary ethanol extracts of CF (Gaertn) colebr. were subjected to the acute oral toxicity study according to the OECD Guideline No. 425. Based on which, three dose levels, i.e., 100, 200 and 400 mg/kg were selected for the further study. In ulcer model, various parameters were studied viz., gastric volume, pH, total acidity, free acidity, and ulcer index. Ranitidine at 50 mg/kg used as the standard drug. The ethanolic extract of CF at the dose of 100, 200 and 400 mg/kg treated groups offered 1.54%, 9.88% and 51.85% ulcer protection in aspirin + pylorus ligation induced peptic ulcers.
